

Pubic Lice

“crabs”

There are three kinds of tiny bugs called lice that live on humans—head lice, body lice, and pubic lice. Pubic lice are also called crabs. Pubic lice attach themselves to hair in the pubic area and sometimes on other coarse hair on the body. They can be on eyebrows, eye lashes, facial hair, and armpits. Crabs are usually spread through sexual contact. The lice or their eggs can also land on beds, towels, or clothing when pubic hairs fall out. They do not hop or fly. They survive by biting the skin and drinking human blood.

Signs and symptoms

If you look closer, the lice or their eggs can be seen at the base of a pubic hair. Many people have intense itching. A few people get blue spots on their skin from the bites, but the spots go away after a short time. Tiny blood spots in underwear is another sign of crabs.

Testing

Pubic lice are large enough to see without a microscope—some people think they are seeing a moving scab or freckle. People who have crabs should be tested for other STDs.

Treatment

There are special shampoos, rinses, and lotions containing lindane that can kill lice. They are sold in drugstores without a prescription. Follow the directions carefully. Talk to the pharmacist about how to use these products. They must be applied correctly and then washed off after a certain number of minutes. They must never be used near the eyes. There are special ointments for brows and lashes.

Pregnant women and children under age 2 must not use lindane products. Also, do not use lindane products if you have sores or cuts on your skin. Ask your doctor or pharmacist for other products. Be sure that everyone you have had intimate contact with in the last 30 days is treated or you will get crabs again.

Wash bedding, towels, and clothing in hot water and dry in a hot dryer to kill any lice that may be on them. Dry cleaning will also kill lice and eggs. Items that cannot be washed or dry cleaned can be wrapped in a plastic bag and sealed for 10 days.

Learn more about pubic lice

If you have questions or need more information, contact your doctor, local health department, or community clinic, or call the National STD Hotline at **1-800-227-8922**.

For persons with disabilities this document is available on request in other formats. To submit a request, please call 1-800-525-0127 (TTY/TDD 1-800-833-6388).

Dear Colleague,

The Washington State Department of Health (DOH) is pleased to provide camera-ready art for printing this educational material. To ensure that the original quality of the piece is maintained, please read and follow the instructions below and the specifications included for professional printing.

- **Use the latest version.** DOH materials are developed using the most current information available, are checked for clinical accuracy, and are field tested with the intended audience to ensure they are clear and readable. DOH programs make periodic revisions to educational materials, so please check this web site to be sure you have the latest version. DOH assumes no responsibility for the use of this material or for any errors or omissions.
- **Do not alter.** We are providing this artwork with the understanding that it will be printed without alterations and copies will be free to the public. Do not edit the text or use illustrations or photographs for other purposes without first contacting us. Please do not alter or remove the DOH logo, publication number or revision date. If you want to use a part of this publication for other purposes, contact the Office of Health Promotion first.
- **For quality reproduction:** Low resolution PDF files are intended for black and white or color desktop printers. They work best if you are making only one or two copies. High resolution PDF files are intended for reproducing large quantities and are set up for use by professional offset print shops. The high resolution files also include detailed printing specifications. Please match them as closely as possible and insist on the best possible quality for all reproductions.
